## Artificial Intelligence in Medicine: 9th Conference on Artificial Intelligence in Medicine in Europe, AIME 2003, Protaras, Cyprus, October 18-22, ... / Lecture Notes in Artificial Intelligence)

The European Society for Artificial Intelligence in Medicine (AIME) was established in 1986 with two main goals: 1) to foster fundamental and applied research in the application of Artificial Intelligence (AI) techniques to medical care and medical research, and 2) to provide a forum for reporting significant results achieved at biennial conferences. Additionally, AIME assists medical industries to identify new AI techniques with high potential for integration into new products. A major activity of this society has been a series of international conferences, from Marseille (FR) in 1987 to Cascais (PT) in 2001, held biennially over the last 16 years. The AIME conference provides a unique opportunity to present and improve the international state of the art of AI in medicine from both a research and an applications perspective. For this purpose, the AIME conference includes invited lectures, contributed papers, system demonstrations, tutorials and workshops. The present volume contains the proceedings of the AIME 2003 conference, the ninth conference on Artificial Intelligence in Medicine in Europe, held in Cyprus, October 18-22, 2003. In the AIME 2003 conference announcement, we encouraged authors to submit original contributions to the development of theory, techniques, and applications of AI in medicine, including the evaluation of health care programs. Theoretical papers should include a prospective part about possible applications to medical problems solving. Technical papers should describe the novelty of the proposed approach, its assumptions and pros and cons compared to other alternative techniques. Application papers should present sufficient information to allow the evaluation of the practical benefits of the proposed system or methodology.
