Building on the success of previous revisions, these new, revised editions of Barry's classic texts retain the original concept of explaining construction technology through key functional/performance requirements. They have been fully updated to include extensive revisions to information on the Building Regulations; expanded discussions of timber frame construction and prefabrication; fully integrated coverage of building and construction sustainability; a more thorough treatment of demolition, and general updates to the text and illustrations reflecting the latest teaching approaches. This special bundle includes both the Introduction and Advanced volumes.
