Physics of Nonneutral Plasmas

Ronald C Davidson

Physics of Nonneutral Plasmas Ronald C Davidson

A nonneutral plasma is a many-body collection of charged particles in which there is not overall charge neutrality. The diverse areas of application of nonneutral plasmas include: precision atomic clocks, trapping of antimatter plasmas and antihydrogen production, quantum computers, nonlinear vortex dynamics and fundamental transport processes in trapped nonneutral plasmas, strongly-coupled one-component plasmas and Coulomb crystals, coherent radiation generation in free electron devices, such as free electron lasers, magnetrons and cyclotron masers, and intense charged particle beam propagation in periodic focusing accelerators and transport systems, to mention a few examples. *Physics of Nonneutral Plasmas* is a graduate-level text — complete with 138 assigned problems and the results from several classic experiments — which covers a broad range of topics related to the fundamental properties of collective processes and nonlinear dynamics of one-component and multispecies charged particle systems in which there is not overall charge neutrality. The subject matter is treated systematically from first principles, using a unified theoretical approach, and the emphasis is on the development of basic concepts that illustrate the underlying physical processes in circumstances where intense self fields play a major role in determining the evolution of the system. The theoretical analysis includes the full influence of dc space charge effects on detailed equilibrium, stability and transport properties. The statistical models used to describe the properties of nonneutral plasmas are based on the nonlinear Vlasov-Maxwell equations, the macroscopic fluid-Maxwell equations, or the Klimontovich-Maxwell equations, as appropriate, and extensive use is made of theoretical techniques developed in the description of multispecies electrically-neutral plasmas, as well as established techniques in classical mechanics, electrodynamics and statistical physics. *Physics of Nonneutral Plasmas* emphasizes basic physics principles, and the thorough presentation style is intended to have a lasting appeal to graduate students and researchers alike. Because of the advanced theoretical techniques developed for describing one-component charged particle systems, this book serves as a useful companion volume to *Physics of Intense Charged Particle Beams in High Energy Accelerators* by Ronald C Davidson and Hong Qin.

From reader reviews:

Bernard McLaren:

The book Physics of Nonneutral Plasmas make one feel enjoy for your spare time. You should use to make your capable a lot more increase. Book can being your best friend when you getting stress or having big problem along with your subject. If you can make looking at a book Physics of Nonneutral Plasmas to be your habit, you can get far more advantages, like add your personal capable, increase your knowledge about several or all subjects. You could know everything if you like open and read a reserve Physics of Nonneutral Plasmas. Kinds of book are a lot of. It means that, science guide or encyclopedia or other people. So , how do you think about this book?

Marvin Murphy:

This Physics of Nonneutral Plasmas usually are reliable for you who want to be a successful person, why. The reason of this Physics of Nonneutral Plasmas can be one of several great books you must have will be giving you more than just simple reading through food but feed anyone with information that maybe will shock your previous knowledge. This book is actually handy, you can bring it everywhere you go and whenever your conditions at e-book and printed kinds. Beside that this Physics of Nonneutral Plasmas forcing you to have an enormous of experience for example rich vocabulary, giving you tryout of critical thinking that we know it useful in your day action. So , let's have it and revel in reading.

Paul Avila:

The e-book with title Physics of Nonneutral Plasmas possesses a lot of information that you can learn it. You can get a lot of profit after read this book. This book exist new expertise the information that exist in this e-book represented the condition of the world currently. That is important to yo7u to be aware of how the improvement of the world. This specific book will bring you inside new era of the internationalization. You can read the e-book on the smart phone, so you can read this anywhere you want.

Pearlie Wong:

Do you have something that you want such as book? The publication lovers usually prefer to select book like comic, limited story and the biggest an example may be novel. Now, why not hoping Physics of Nonneutral Plasmas that give your satisfaction preference will be satisfied by means of reading this book. Reading addiction all over the world can be said as the way for people to know world considerably better then how they react to the world. It can't be explained constantly that reading addiction only for the geeky man but for all of you who wants to be success person. So , for every you who want to start examining as your good habit, it is possible to pick Physics of Nonneutral Plasmas become your own starter.
